

Press Release

July 2006

Caleffi 535 Series Pressure Reducing Valve

The using of Pressure Reducing Valves is becoming more and more popular. This is largely as a result of the greater emphasis on saving water, plus the 500kPa maximum pressure requirements coming into effect as a national plumbing regulation.

The Caleffi #535 series “dial-up” model, which is designed primarily for commercial and industrial applications, is now rapidly gaining popularity with a number of different sectors of the marketplace.

Some advantages of the #535 series pressure reducing valve are:

- Compact design Easy “dial-up” adjustment
- Union ends
- High flow rate
- Internal strainer
- Standard gauge port
- Adjustable 100-600kPa
- Extremely cost effective
- Available in sizes 15mm - 50mm
