HIGH PERFORMANCE TEMPERING VALVE

Just a reminder that the new high performance tempering valve has just arrived and is now available on the Australian market.

The green-cap HP tempering valve is suitable for installation on instantaneous hot water systems and are priced competitively against other similar valves in the market.

Sizes are available in 15mm and 20mm.

Feature Product:

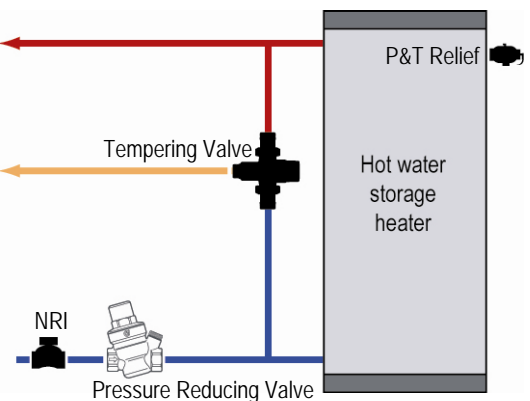

“One Valve – Many Solutions”

A leading water heater manufacturer has reported that 95% of service calls regarding the tempering valve is due to foreign particles such as small pieces of solder or teflon tape interfering with the functioning of the valve. These unwarranted calls are also a large percentage of their overall call outs which take up a lot of time and resources for something that has a simple solution.

The Solution...

Pressure Reducing Valves are a versatile piece of equipment that should be installed on all hot water services in preference to limiting valves. The Caleffi brand Pressure Reducing Valve has a large integrated strainer which minimises the need to service the tempering valve. The cartridge in the pressure reducing valve can easily be removed inline, allowing the strainer to be washed and quickly placed back in service.

A pressure reducing valve should be installed on a hot water unit to protect the water heater and other valves in the system. As a rough guide, the adjustable pressure reducing valve should be set at approximately half that of the P&T valve for both safety and performance reasons. The exact settings are different for each hot water unit and the specifications are available from the manufacturer.

An additional feature of the Caleffi pressure reducing valve is that it is rated to 60°C, which is suitable for the cold water inlet, unlike some limiting valves which are rated to 40°C making them unsuitable for some hot Australian summers!

Finally, as an additional tip, we've recently discovered that under the "Guide to Standards & Tolerances 2007", published by the Building Commission, water hammer is considered a defect unless caused by solenoids or ceramic valves in appliances supplied by the owner. So the Caleffi pressure reducing valve will also help solve this 'defect'.

JOKE OF THE MONTH

Two guys are walking down the street when a mugger approaches them and demands their money. They both grudgingly pull out their wallets and begin taking out their cash. Just then one guy turns to the other and hands him a bill. "Here's that \$20 I owe you," he says.

Instantaneous Water Heater Ball Valves

Save time and money on the easy solution to instantaneous water heater systems. Designed to allow a quick installation without having to use all those brass fittings, the new instantaneous water heater ball valve comes complete with a loose nut & tail.

AUGUST SPECIAL
\$17.50
FOR A PAIR

Instantaneous water heater ball valves come with one DR watermarked and one gas approved ball valve as a set. They are available in either flared or threaded connections.

ORDER FORM

To take advantage of these special prices, simply fill in your details and fax back to All Valve Industries on the number below.

Size	Code	Description	Special Nett	Qty Req'd
20mm	INSTCC-020	App. Gas and W/marked Ball Valves Loose Nut/Flared	\$ 17.50 pair	
20mm	INSTBSP-020	App. Gas and W/marked Ball Valves Loose Nut/Threaded	\$ 17.50 pair
