## **Cim 32 Check Valve**

Unlike most spring check valves, the Cim 32 series spring check valve has a male and female BSP end connections (M&F). This gives this valve the distinct advantage of having a very short face / face dimension.

The Cim 32 is made from nickel plated brass and has a stainless steel spring. Because the check valve has an NBR rubber o-ring and a Delrin inner seat and guide, it means the check valve can handle temperatures of up to 90°C and up to 1600kPa static pressure. The valve comes in sizes 15mm to 50mm and can be used in many applications including heating, plumbing, compressed air systems, pumps and autoclaves.

The main benefit of using the Cim#32 check valve is its compact design. It is also economical as the M&F feature saves money by only having to supply and install one nipple with the valve.

Cim valves are always of the highest quality and this one is no different. The Cim #32 M&F check valve is a product that is exclusive to All Valve Industries. Please call us for more details.
