NEW VIC SALES REP

All Valve has retained the services of Peter Mclean, who has been involved in the sale of valves and plumbing products for many years and will definitely add to the depth of talent in the All Valve team. Peter will be predominately be calling on stores in Victoria but his territory will also include the Albury Wodonga area.

Sales enquiries should still be directed to our Sydney office. If you would like Peter to call in, please give him a call on 0408 428 740.

NEW ALL VALVE INDUSTRIES PRODUCT GUIDE AVAILABLE

A new-look catalogue has been designed, with an updated products section to make finding valves stocked by All Valve Industries quicker and easier. If you would like a new catalogue, please contact Daniel on 02 8543 5111 or email daniel@allvalve.com.au. Who knows, you may find products you never knew we had!

Feature Product:

14M-AF 'Anti-Frost' Ball Valve

It's that time of year again when we put away our summer clothes, and replace them with warm jumpers and Ugg boots to stop ourselves from freezing. But what about protecting our valves and pipework from freezing conditions?

That's where the Cim 14M-AF 'Anti-Frost' ball valve is needed with its patented "anti-frost" ball design. As most people would know, when water freezes it expands, and is often the cause of **major** problems with ball valves. The expansion when water in the valve turns to ice causes the body of the ball valve to crack with the telltale sign of a star-shaped crack on one side of the valve.

With the Cim 'Anti-Frost' ball valve, the water is able to expand safely away from the valve. Because of this innovative feature, the 'Anti-Frost' ball valve has far less chance of cracking, causing leaks and requiring a replacement valve.

All Valve still recommends that the valves should be lagged for protection against freezing conditions.

For more information or pricing on this product, please call us on 02 8543 5111.

JOKE OF THE MONTH

Proudly showing off his new apartment to a friend late one night, the drunk led the way to the bedroom, where there was a big brass gong. "What's that brass gong for?" asked the friend. "It's not a gong. It's a talking clock," the drunk replied. "A talking clock? How's it work?" "Watch this," said the drunk. He took a hammer, gave the gong an ear-shattering pound and waited. Someone on the other side of the wall screamed: "Hey, you jerk. It's 3:00 in the morning!"

NEW 3-Way Boundary Pressure Reducing Valve

- Ideal for meter connection
- Factory set at 500kPa
- Competitively priced

The Caleffi 3-way Boundary Pressure Reducing Valve incorporates an additional port at the bottom of the valve to allow for various configurations. This innovation has come about through a need for reducing valves to form the right angle in some boundary meter connections. The valve comes standard with a plug to seal one outlet, meaning the valve can be used in three different configurations: - Straight Through, Right Angle or Dual Outlet
