FLOW REGULATION AND ISOLATION

FUNCTION AND FEATURES

- | | |
|---------------------------------|--------------------------------------|
| ■ Bronze body with brass bonnet | ■ Union bonnet for easy maintenance. |
| ■ Stainless steel seat and disc | ■ Suitable for water, air and steam |
| ■ Rated to PN25 and up to 180°C | ■ Quality Italian made product |

PRODUCT DETAILS

A globe valve is a type of valve used for regulating flow in a pipeline and other applications requiring throttling and frequent operation. For example, globe valves may be used as sampling valves, which are normally shut except when liquid samples are being taken. Since these types of valves restrict flow, they are not recommended where full flow is required.

The 016 series has BSP parallel threads (ISO228.1 and ANSI ASME B1.20.1)
